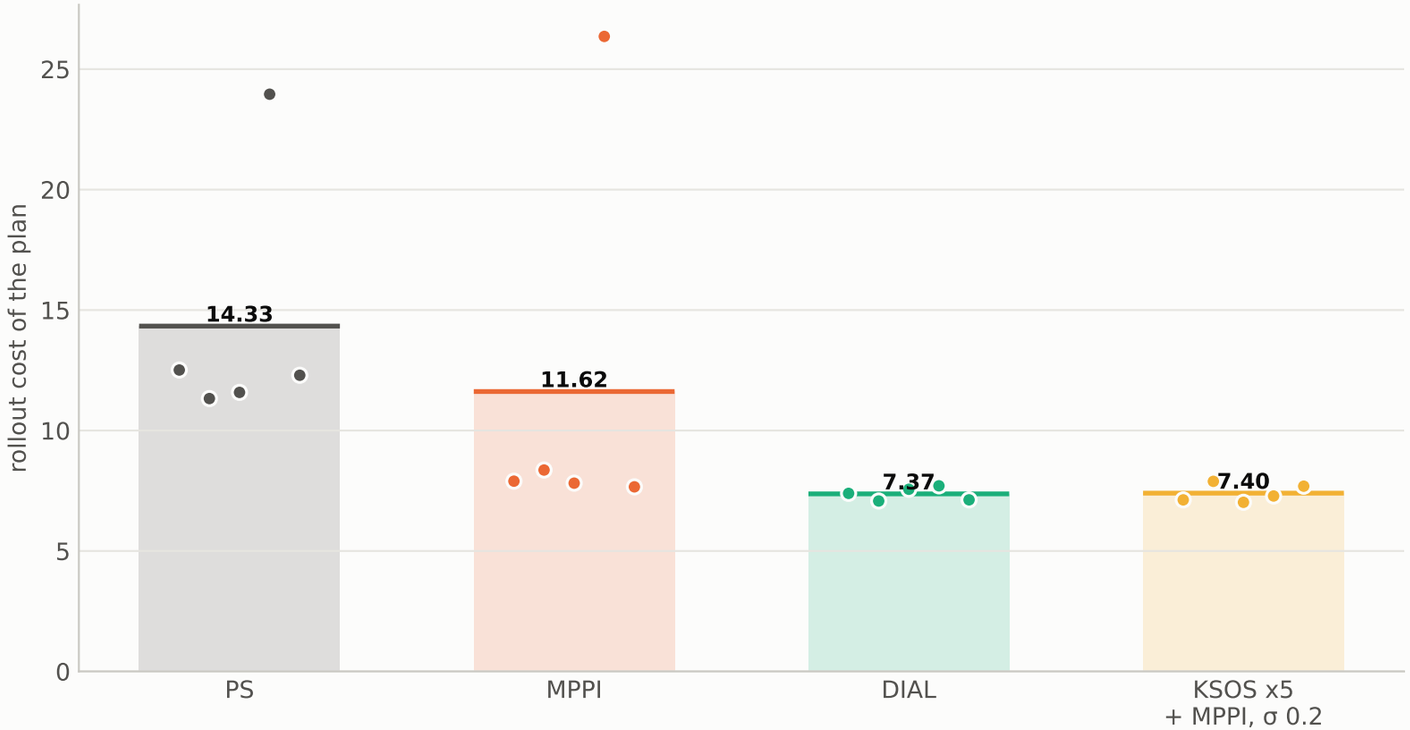
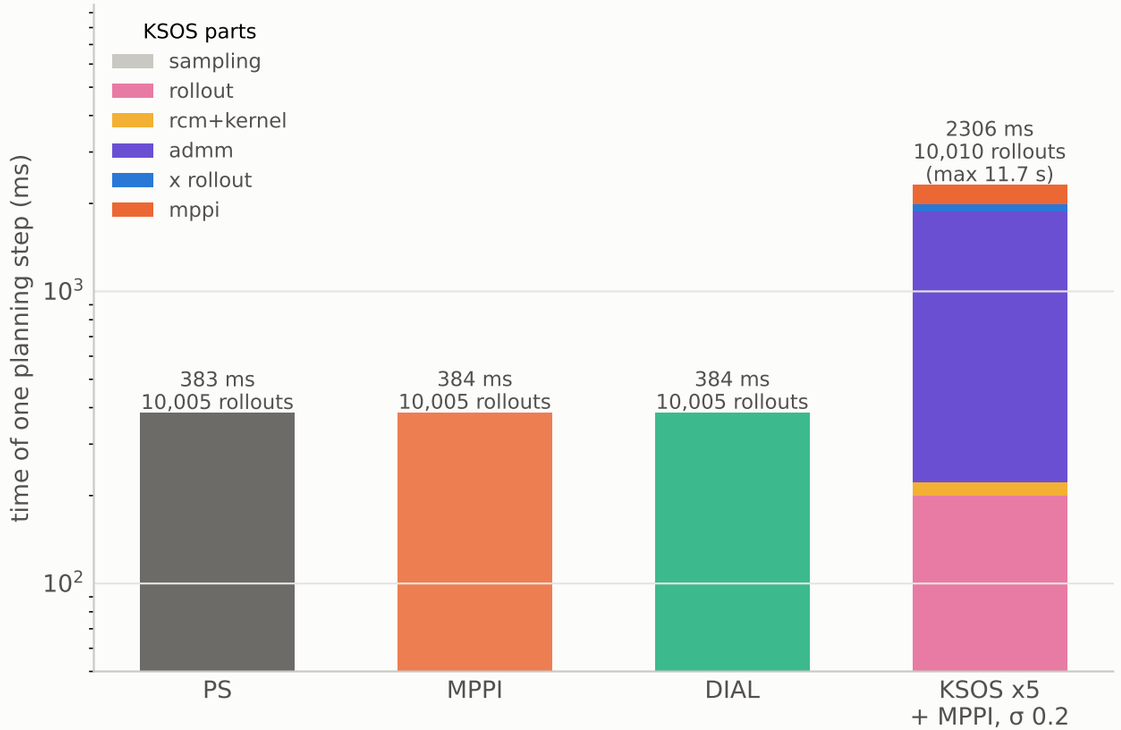
PushT, one planning step from one start state (cold start): KSOS vs PS / MPPI / DIAL

Same budget (about 10,000 rollouts): PS / MPPI / DIAL 2000 samples × 5 iterations; KSOS 5 restarts × 1000 samples + MPPI 1000 × 5 (σ = 0.2, temp 0.1); seeds 0–4

Plan cost (dots = seeds, bar = mean; lower is better)





Planning time (median over seeds, log scale, JIT excluded)
